Completion of this form is required by Heritage Western Cape for the initiation of all impact assessment processes under Section 38(1) & (8) of the National Heritage Resources Act (NHRA).

Whilst it is not a requirement, it may expedite processes and in particular avoid calls for additional information if certain of the information required in this form is provided by a heritage specialist/s with the necessary qualifications, skills and experience.

A. APPLICABILITY OF THE NATIONAL ENVIRONMENTAL MANAGEMENT ACT (NEMA)

HWC Case Number: 19062711	DEADP Reference Number:
NOTE: A DEADP (W Cape Dept. Environment Affairs & Development Planning) reference number must be included in all NHRA Section 38(8) processes where DEADP is the decision making authority under NEMA. The effect of this requirement is that the NEMA process must be initiated with DEADP prior to the NHRA process with HWC.	
If a DEADP reference number is not entered above please check one of the following boxes:	
<input type="checkbox"/> This application is made in terms of Section 38(8) of the NHRA and an application under NEMA has been made to the following authority:	
<input type="checkbox"/> This development will not require a NEMA application.	
NOTE: Making an incorrect statement or providing incorrect information in this part of the form may result in all or part of the application having to be reconsidered by HWC in the future, or submission of a new application.

DEVELOPMENT DETAILS:

<p>Please indicate below which of the following Sections of the National Heritage Resources Act, or other legislation has triggered the need for notification of intent to develop.</p>	
<p><input type="checkbox"/> S38(1)(a) Construction of a road, wall, powerline, pipeline, canal or other similar form of linear development or barrier over 300m in length.</p>	<p>S38(1)(c) Any development or activity that will change the character of a site -</p> <p><input checked="" type="checkbox"/> (i) exceeding 5 000m² in extent;</p> <p><input type="checkbox"/> (ii) involving three or more existing erven or subdivisions thereof;</p> <p><input type="checkbox"/> (iii) involving three or more erven or divisions thereof which have been consolidated within the past five years.</p>
<p><input type="checkbox"/> S38(1)(b) Construction of a bridge or similar structure exceeding 50m in length.</p>	
<p><input type="checkbox"/> S38(1)(d) Rezoning of a site exceeding 10 000m² in extent.</p>	
<p><input type="checkbox"/> Other triggers, eg: in terms of other legislation, (ie: National Environment Management Act, etc.) Please set out details:</p>	<p>If you have checked any of the three boxes above, describe how the proposed development will change the character of the site:</p> <p>A sand mine will be developed on 5ha of agricultural land currently heavily infested by alien wattles with little natural vegetation remaining. After sand has been removed topsoil will be replaced, the site will be rehabilitated and used for agricultural purposes.</p>

If an impact assessment process has also been / will be initiated in terms of other legislation please provide the following information:

Authority / government department (ie: consenting authority) to which information has been /will be submitted for final decision: Department Mineral Resources

Present phase at which the process with that authority stands: Application to be submitted

Provide a full description of the nature and extent of the proposed development or activity including its potential impacts (eg: changes in land use, envisaged timeframes, provision of additional bulk services, excavations, landscaping, total floor area, height of development, etc. etc.):

The mining operator will first remove the topsoil layer (500mm) from block 1 and stockpile it on the to be mined block 2. The mineable sand will then be removed from block 1, up to the underlying gravel layer, by a front-end loader and loaded onto tip-trucks.

When all mineable sand is removed from block 1, the stockpiled topsoil on block 2 is removed and immediately placed on block 1, leaving 250mm topsoil above the clay layer.

Removal of topsoil from block 2 commences and is stockpiled on block 3, where after mining on block 3 commence.

Concurrent mining and rehabilitation continues until the sand resource on the 4 mining blocks is removed.

The mining process reduced the depth of the sand but, following the recommended rehabilitation measures, will leave a minimum of 500 mm of topsoil sand above the clay layer after rehabilitation. This reduced depth will have little effect on the agricultural potential because there is sufficient drainage and soil depth (top soil and gravel) in the rehabilitated mined area.

Rehabilitation should include ripping with the slope through the rehabilitated area and immediately below it, to ensure that the soil is loose and that any compaction by mining machinery has been alleviated. Ripping should be done after the spreading of the topsoil and should be no deeper than approximately 20 cm. A cover crop must be established immediately after spreading of topsoil and ripping, to stabilize the soil and protect it from erosion.

C. HERITAGE RESOURCES AND IMPACTS THEREUPON

Section 3 of the National Heritage Resources Act sets out the following categories of heritage resource as forming part of the national estate. Please indicate the known presence of any of these by checking the box alongside and then providing a description of each occurrence, including nature, location, size, type

Failure to provide sufficient detail or to anticipate the likely presence of heritage resources on the site may lead to a request for more detailed specialist information.

(The assistance of relevant heritage professionals is particularly relevant in completing this section.)
